DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 and 5-10 are rejected under 35 U.S.C. 102(b) as being anticipated by PCT number Wohlstaster et al. 99/34202 to Sugihara et al..

Regarding claims 1 and 8, Sugihara et al. disclose a plurality of micro-electrodes provided on a first region on a substrate (page 9 lines 10-18, Fig. 3), a reference electrode provided in a second region on the substrate (page 9 lines 10-18, Fig. 3), wherein the reference electrode includes at least one stimulus reference electrode for applying an electrical signal to the plurality of microelectrodes (page 9 lines 24-27) and wherein the biological specimen is placed in such a manner as to overlap the first region and not overlap the second region (page 13 lines 29-30).

Regarding claims 2 and 6, Sugihara et al. disclose a reference electrode/electrodes for detecting an electrical signal from the plurality of micro-electrodes (page 13 lines 18-25) and stimulus reference electrodes insulated from the measurement reference electrode (page 9 lines 24-25).

Regarding claim 3, Sugihara et al. disclose the second region placed at a distance from outer edge of first region (page 10 lines 3-8, Fig. 4) and is in a second region surrounding the first region (page 10 lines 28-32).

Regarding claim 5, Sugihara et al. disclose setting the distance to a value such that electrical noise generated from a micro-electrode signal is not detected (page 2 lines 3-11).

Regarding claim 7, Sugihara et al. disclose the plurality of micro-electrodes are arranged in a matrix (Fig. 3).

Regarding claim 9, Sugihara et al. disclose an output signal processor connected to the micro-electrodes (page 8 lines 20-27), and a stimulus signal provider for providing an electrical stimulus to the specimen (page 7 lines 23-25).

Regarding claim 10, Sugihara et al. disclose an optical monitoring apparatus for optically monitoring a specimen (page 6 lines 31-32).
